Iran's Nuclear Programme After the Strikes

Chelsey Wiley and Alexander K. Bollfrass, International Institute for Strategic Studies, August 2025

After coordinated Israeli and US strikes on Iran's nuclear infrastructure, it remains to be seen if and how quickly Iran can rebuild. While the attacks were disruptive, they did not succeed in destroying key facilities, thereby allowing Iran to resume its nuclear ambitions.

Bias in Military Artificial Intelligence and Compliance with International Humanitarian Law

Laura Bruun and Dr Marta Bo, Stockholm International Peace Research Institute, August 2025

Drawing from insights gained during an expert workshop convened by SIPRI, this report explores the implications of bias in military AI for compliance with international humanitarian law (IHL). The report first unpacks what 'bias in military AI' refers to and what its causes are. Then, focusing on bias in AI-enabled autonomous weapon systems and AI-enabled decision support systems used for targeting, it examines the implications of bias for compliance with IHL, particularly the principles of distinction, proportionality and precautions in attack. Then, it outlines technical, operational and institutional measures to address bias and strengthen IHL compliance. In closing, it outlines key findings and recommendations to states involved in military AI policy debates.

Enabling Responsible Space Behaviours Through Space Situational Awareness

Douglas Barrie, Matthew Bint, Ester Sabatino, International Institute for Strategic Studies, August 2025

Space is fundamental for global economic activity, but its congestion and militarisation represent risks. This report details steps taken by the UN to influence state behaviour and examines how SSA capabilities can support trust and confidence building. It provides a specific focus on Indo-Pacific countries' approaches and capabilities.

Project Manager / Policy Fellow – “From the Noise, the Signal”

BASIC is seeking a motivated and dynamic Project Manager (Policy Fellow) to lead BASIC's deliverables within our joint project with the Federation of the American Scientists (FAS): 'From the Noise, the Signal'. The project investigates how emerging and disruptive technologies (EDTs) pose credible threats and disrupt traditional assumptions regarding relative military advantages and disadvantages.

Application deadline: 15 September 2025
